

CHICAGO SKYWAY

Brandenburg has frequently performed work on this major roadway as it received many alterations and updates over the past several years.

OWNER

City of Chicago, Department of Streets and Sanitation

LOCATION

Chicago IL

FACILITY TYPE

Elevated roadway, bridge, viaducts, and ramps

PROJECT BACKGROUND

The Chicago Skyway is a vital roadway that connects Chicago and Northwest Indiana. Brandenburg has frequently performed work on this major roadway as it received many alterations and updates over the past several years. Brandenburg's work included the removal of concrete decks, structural steel, foundations and asbestos. The projects demanded both extreme time and physical constraints. The work performed was typically required to be done in extremely quick intervals allowing for the construction crews to begin reconstruction immediate after demolition was complete. Brandenburg was forced to complete their portion of work while contending with many obstructions including live vehicular traffic, live railways, live roadways, waterways, and adjacent structures to remain.

SCOPE OF WORK

Remove concrete slabs, while protecting remaining steel structures

Completely remove multiple ramp and support structures including piers

Work must be performed without disrupting live traffic

Work must be performed without disrupting adjacent railroad operations

Provide protective barriers for live traffic and adjacent structures

Project must be completed on schedule
